

# Cadastral Survey

CADASTRAL SURVEY

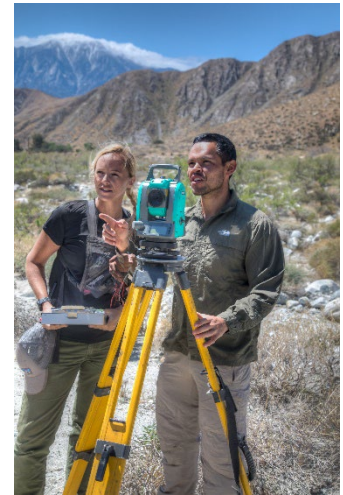

Cadastral Surveyors specialize in the boundaries of public land. Surveyors help us understand land boundaries and make sure everyone knows where their property is.

## Measuring Land – A Treasure Hunt for Corners

Surveyors go out into the field with tools like GPS (Global Positioning System) and measuring equipment to find exact locations.

## Maps and Technology – GIS Adventures IRL

Surveyors use computers to create detailed maps and keep records of land ownership. This information is really important for planning cities, parks, and other places where people live and play.

## Do you ... Love Being Outside?

*Adventure:* Cadastral surveyors spend a lot of time outside, exploring different landscapes. If you enjoy being in nature, hiking, and discovering new places, you will enjoy surveying!

## Do you ... Like Solving Puzzles

Cadastral surveyors often face challenges, like figuring out where boundaries are. If you love solving puzzles and figuring things out, this job will keep your brain active!

*Critical Thinking:* You'll use math and logic to help people understand land boundaries, which can be very satisfying.

## Do you ... Enjoy Technology and Tools

*Cool Gadgets:* Surveyors use high-tech tools like GPS, drones, and computers to do their work. If you enjoy technology and learning how to use new devices, this field has plenty of that!

*Map Making:* Creating maps and using software to visualize data can be really fun, especially if you like art and design.

## Do you ... Like Making a Difference

*Helping Communities:* Cadastral surveyors play an important role in helping people understand land ownership. You can help prevent disputes and ensure everyone knows their rights, making communities more harmonious.

*Protecting Nature:* By mapping and managing land, you contribute to protecting natural resources and wildlife habitats, making a positive impact on the environment.
